PROFESSIONAL SUMMARY

IT graduate (Diploma in Information Technology, Vaal University of Technology, 2025) with hands-on experience building Java backend applications using JDBC, MySQL and Maven. Comfortable applying object-oriented design and separation of concerns to keep projects clean, structured and maintainable. Also contributed to an AI-driven patient risk prediction system as part of a university team project. Currently expanding into Spring Boot. Looking for an internship or junior developer role to keep learning and contribute to real production code.

TECHNICAL SKILLS

- Languages & Core: Java (Object-Oriented Programming), Maven, Python basics, HTML, CSS
- Databases: MySQL, JDBC
- Local Server: XAMPP
- Version Control: Git, GitHub
- Currently Learning: Spring Boot
- Productivity Tools: Microsoft Word, Excel, PowerPoint, Terminal

PROJECTS

CarePredict-AI — Patient Risk Prediction System (Team Project) — *Business Analysis 3.2*

- Final assessment project built with a 9-member team; predicts a patient's risk level (high, medium or low) from symptoms, medical history and lifestyle data to reduce hospital queue times
- Contributed to both the technical build (data preparation and model support) and the full project documentation, business case and presentation
- Presented the solution to the lecturer with complete documentation and a poster
- Tools: Python, PyCharm, XGBoost, TF-IDF (NLP), Pandas, scikit-learn, GitHub

Student Registration System — *Java, JDBC, MySQL, XAMPP*

- Built a Java desktop application to register, update and manage student records, connected to a MySQL database via XAMPP
- Applied object-oriented design and separation of concerns to keep the codebase organized and maintainable

Student Mark Recorder — *Java, JDBC, MySQL, XAMPP*

- Developed a Java application to record and manage student marks, using JDBC to read from and write to a MySQL database
- Structured the project using OOP principles and separation of concerns

MS Banking Application (In Progress) — *Java, JDBC, MySQL, XAMPP, Maven*

- Building a Java application for core banking operations, including account creation, deposits, withdrawals and transfers
- Applying OOP design and separation of concerns; exploring Spring Boot for a future iteration

EDUCATION

Diploma in Information Technology — *Vaal University of Technology — Completed 2025*

Grade 12 — *Driekoppies Combined School — Completed 2021*
